

Opening Ports for SIP Telephony in The Cloud

If the Firewall is a General Type:

WAN To LAN - Open ports range (If possible, open ANY & ANY) in protocols TCP & UDP to all addresses or domains:

TCP	UDP
5060-5061	5060-5061
	10000-35000

LAN To WAN - ANY > ANY

Disable - "SIP ALG"

If the firewall is a Checkpoint type:

Open all the addresses listed above and also follow these steps:

- You should mark "V" in "Deep Inspection"
- Keep Alive Time Out: Users & Objects > Services > SIP > Sip_UDP > Advanced > Session Timed out > Set to 200
- Set QOS: Device > Internet > ISP Dialup > Advanced > QOS Settings > Enable QOS (upload) > ISP bandwidth upload (בהתאם לחבילת גלישה)
- Access Policy > QOS > Blade Control > ON
- Access Policy > QOS > Policy > Source & Destination > ANY ANY SIP 20% / 25%
